How to Start the CBL Migration Process

MOVE TO C AND EXPAND YOUR HORIZONS

CBL gives you an economical way to convert legacy DIBOL applications to the open environment offered by the C programming language. CBL allows you to convert your applications without giving up your investment in application design and development and without necessitating user retraining. Once you have converted to C, the possibilities for expansion and diversification of your software systems are endless.

WHAT'S NEXT?

After reviewing all of the information concerning the CBL migration process, you are probably wondering what comes next. This depends upon how you would like to pursue conversion of your DIBOL applications. The following sections outline your options to start the conversion process.

ESTIMATING MIGRATION COSTS

A primary concern to most businesses is the cost associated with a project. If you would like an estimate of the cost of converting your DIBOL applications to C using CBL, you have two options.

Migration Budgetary Estimate

MSI can provide you with a budgetary estimate of the cost of converting your DIBOL applications to C using CBL under the OpenVMS environment. To obtain a budgetary estimate, you simply provide us

with information concerning the number and type of modules used in each application. Provide us with as much information concerning the applications as possible. The more information you provide, the more accurately we can estimate the conversion effort.

The budgetary estimate provides the estimated conversion cost in a range. For example, a budgetary estimate might indicate that it will cost between \$20,000 and \$25,000 to convert your applications. Generation of a budgetary estimate is a free service.

When providing material for a budgetary estimate, please include the following information:

- A brief description of each application.
- The number of DIBOL program modules in each application.
- The number of external DIBOL subroutines used by each application.
- The number of include files used in each application.
- The number of non-DIBOL modules used in each application.
 - The programming language in which the non-DIBOL modules are written.
 - The type of interface used by the non-DIBOL modules.
- The number of DCL command procedures associated with each application.
- Information on any other items that pertain to the application and its use under OpenVMS.

Migration Feasibility Study

Your second option is to submit a copy of your software to MSI for analysis. We will analyze the software applications and generate a Migration Feasibility Study that estimates the cost to convert them to C using CBL under the OpenVMS environment. The report will also make conversion recommendations based on our findings and indicate any areas where there might be problems in the conversion process.

Note: A Migration Feasibility Study is required if you would like to obtain a fixed-price quote for a turnkey migration service.

A fee is charged for the Migration Feasibility Study.¹

NEED A SAMPLE MIGRATION?

If you need to see a sample migration to prove that the CBL DIBOL to C conversion process is capable of satisfying your needs, contact us and request it. We will work with you to obtain a sample of your code, convert it, and demonstrate it. A fee is charged for this service.¹

THE CBL DEMO KIT

If you would like to try out CBL on your own, contact us, and order a CBL Demo Kit. The kit is a complete implementation of CBL, including documentation, and will run for 60 days, giving you plenty of time to put it through its paces. The demo kit purchase price can be applied as a credit towards the purchase of a fully licensed CBL kit.

¹ The fee can be applied as a credit towards the total cost of the application migration if MSI provides the service.

ORDERING SOFTWARE AND SERVICES

If you are ready to start migrating your DIBOL applications to C, contact us to order the software packages and migration services you need to get the job done. Pricing and order information has been included in this packet.

We hope the information we have provided will convince you to seriously consider MSI products and services to meet your business needs. We look forward to working with you to develop solutions for your needs, present and future.
